

REACH

REACH Compliance Solutions...because this "RoHS on Steroids" Regulation is expected to restrict 250 times the number of RoHS-restricted substances: 1500 substances vs. 6 substances.

GCG's Domain Expertise, Tools and "No Nonsense" Managed Services Approach
Are you a finished goods manufacturer, contract manufacturer or component supplier ("Downstream User")?

GCG can save you a ton of REACH-related time, cost and stress.

GCG can rapidly implement our award-winning Substance Management Software Solution while utilizing our internationally recognized domain expertise to address your company's REACH requirements.

GCG can assist you today in:

- Cutting through REACH's complexity
 - o 849 pages
 - o ~30,000 substances to be registered
 - o The need to be sure your substance uses are registered – and are authorized ??
- Making sure you can continue to sell into the world's largest developed market
 - o "How do we calculate the collective weight of any carcinogenic, mutagenic, persistent or bio-accumulative substances in our products?"
 - o "We can't sell into the UK or Germany because no-one registered how we actually use one of our critical substances?"
- Minimizing your supply chain/business interruption risks
 - o "What if our supplier discontinues a critical substance?"
 - o "We have to communicate risk management methods to our customers?"

GCG's "One-Step-At-A-Time" Approach to REACH Compliance

We'll assess your REACH status and identify your gaps. Then we'll make recommendations, lay out a roadmap and implement GCG's Phase 1 REACHTrack™ Matrix. As a result, you will be:

- Ready for REACH's June – December, 2008 pre-registration window
- On top of your critical, key and high-concern substances
- Well on your way towards implementing your REACH project plan
- Ahead of the long REACH curve (and probably your competitors)
- In line with the urging of the EU's largest electronics industry association: "Start Now!" to prepare for REACH

Key questions:

- Do you fully understand high-stakes impact that REACH will have on your business and your supply chain?
- Can you afford to lose revenue because critical substances and their uses aren't registered?
- Can your IT systems incorporate a substance library and seamlessly track all the supplier, weight, volume and other multi-column data points you will need?
